

VALUE BY DESIGN

INTEGRATION OF VALUE ENGINEERING & SUSTAINABILITY

with case studies of Hydro Electric Infrastructure Projects

A. P. Sukumar, MBA, Ph.D., PE/SE., P.Eng , PMP

British Columbia, Canada.

**ANNUAL CONFERENCE 2012,
CALGARY
25 October 2012**

Not part of my job...!

Value by Design has no Value if this was your project.....

VALUE BY DESIGN

INTEGRATION OF VALUE ENGINEERING & SUSTAINABILITY

Presentation Outline

Value & Sustainability

Triple Bottom Line

Infrastructure project Footprint

Value by Design

Sustainable strategies

Value based Sustainable Design

Knowledge Transfer

Value Strategies

Case Studies of Large Power Projects

Process followed

Significant Proposals – Sustainable appraisal

Accomplishments

Sustainability Appraisals

Value by Design

combines the concepts of INTEGRATED VALUE with CREATIVITY in a Group setting through facilitated brain steering

- **Low / Optimum cost**
- **Sustainable Development**
- **Corporate Responsibility**

Optimum Value by Design is achieved when the necessary performance of a system is defined and delivered at the lowest life cycle cost by balancing the three bottom lines (integrated value)

- **Lowest Financial cost**
- **Lowest Environmental impact**
- **Greatest Social benefit**

Creativity & Innovation

Team work

Persistence

VALUE BY DESIGN

Sustainability & Three Bottom Lines

Corporations are accountable to people to take care of the **environment**, meet **community needs** and deliver excellent **financial results**.

Commitment to **sustainability** means **balancing, tracking and measuring** the Corporate performance along **environmental, social and economic bottom lines**

**Sustainability -
Balancing the Three Basic Aspects
Triple bottom Line**

**Value by Design is for a
Holistic development**

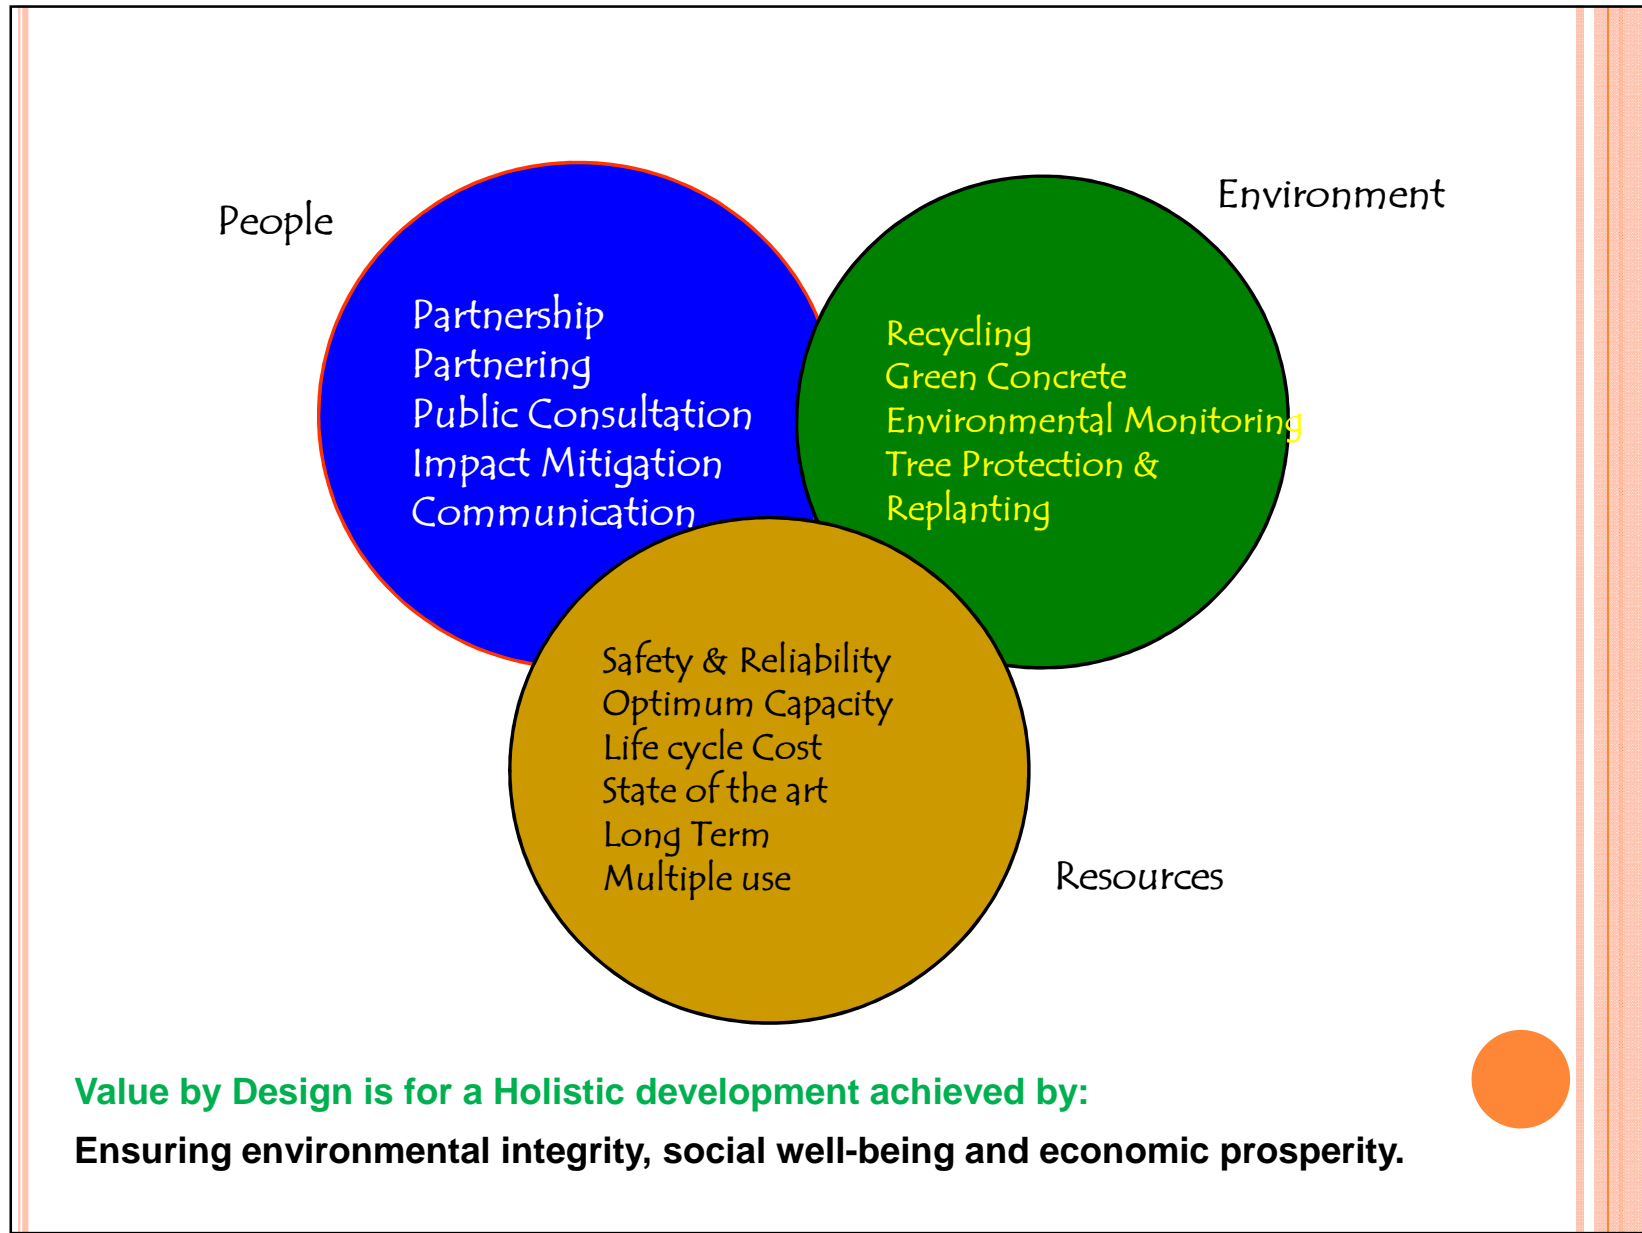

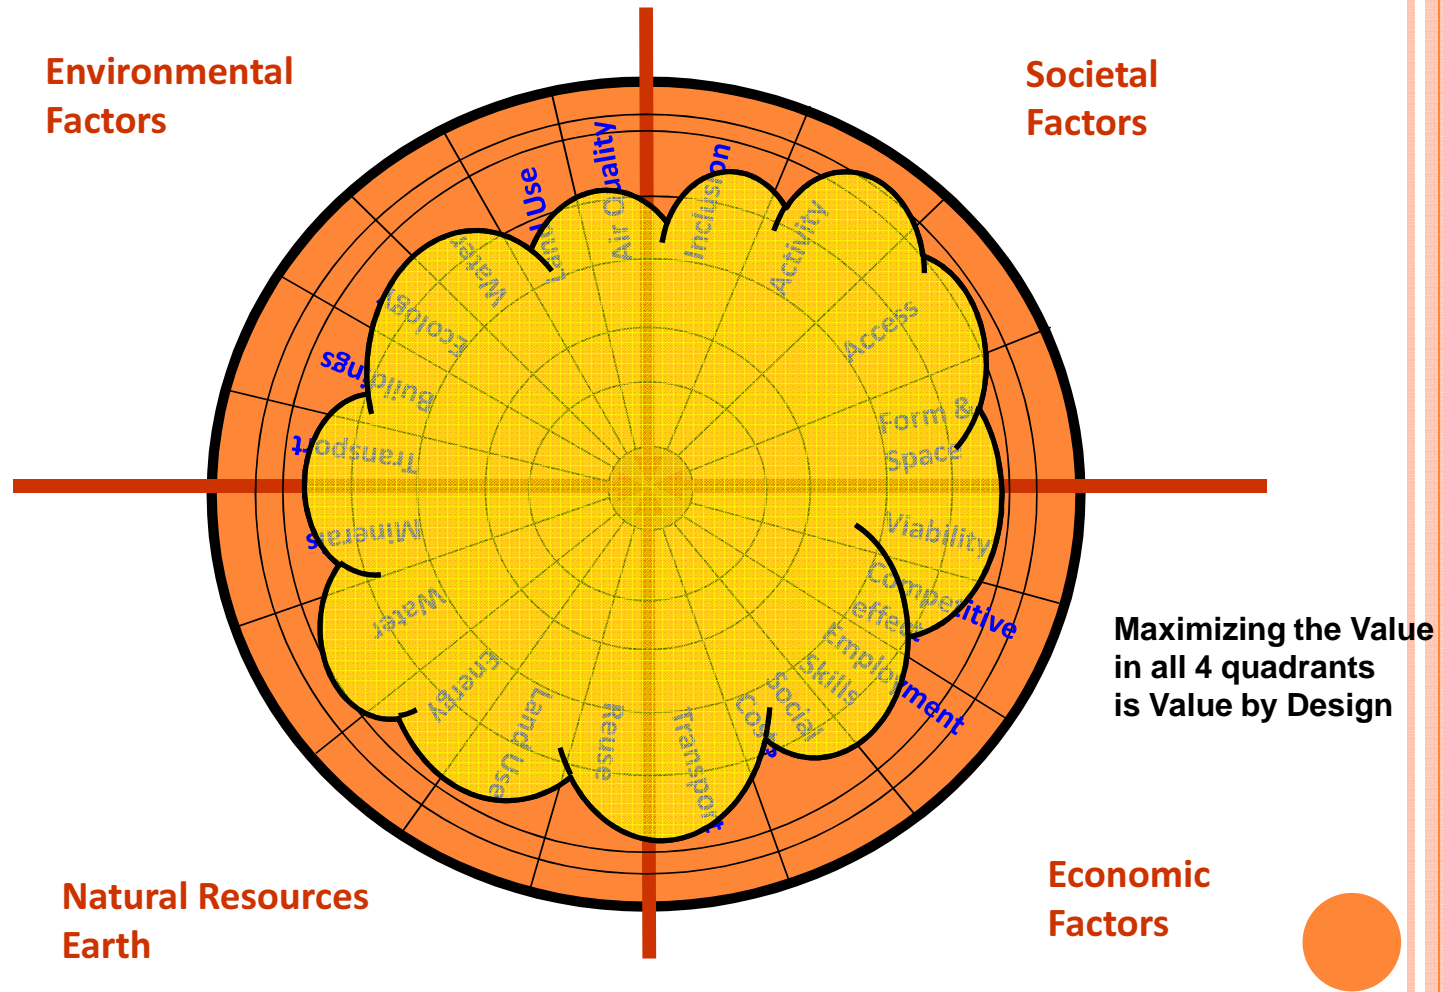

Sustainability is about satisfying the needs of the present without compromising the ability of our future generations to meet their own needs

Sustainable development is about meeting the **growing needs** of natural resources, industrial products, energy, food, shelter and effective waste management while conserving and protecting environmental quality and natural resource base essential for future generations.

Sustainable Appraisal of a Project

SPeAR Riches, 2003

Construction produces 50% volume of garbage in the landfill !

Construction footprint !

The CO2 Numbers (approximate)

1 tonne clinker = 1 tonne CO2

8,000 Km

Forest sink
2,000 m²/a

concrete column

Carbon footprint !

Sustainability Strategy applied to Construction Projects:

- Minimize Environmental Impact
- Minimize Social Impact
- Optimize Resource Utilization & Life Cycle Cost
- Use State of the art technology

EcoSmart™ Strategy:

To minimize GHG “signature” of concrete by optimizing replacement of Portland cement with SCM while improving or maintaining :

- Cost
- Performance
- Constructability
- Project Delivery

Value by Design

ENVIRONMENTAL IMPACT Of Concrete Construction

- **Annual global: 5 billion cubic yards.**
- **Next only to Water in consumption!**

Twice as much concrete is used in construction around the world than the total of all other building materials, including wood, steel, plastic and aluminum.

Making one tonne of cement:

- **requires 2 tonnes of raw material (limestone and shale)**
- **consumes 4 GJ of energy in electricity, process heat, and transport (the energy equivalent to 131 cubic metres of natural gas)**
- **produces 3 kg of NOX, causing ground-level smog**
- **produces 0.4 kg of PM10 - particulate harmful to the respiratory tract**
- **produces 1 tonne of CO2 emission**

SEYMOUR-CAPILANO CLEAR WELLS (METRO VANCOUVER)
HIGH VOLUME FLY ASH CONCRETE & GEOTHERMAL PIPING

Sustainable Value Accomplishments: actual project example

On time, under budget

didn't use contingency fund

Met people's needs

alternate arrangements, facility to see construction partnership, partnering, business needs

Recycling of concrete - 10,000 cu.m

on-site separation of steel ensuring recycling

Environmentally excellent- exceeding standards

no pollution, including sound, well managed run off, etc. plant & animals,

High quality concrete construction with EcoSmart Concrete

44% SCM on 28,000 cu.m. Reduction of CO2 footprint (4200 tonnes)

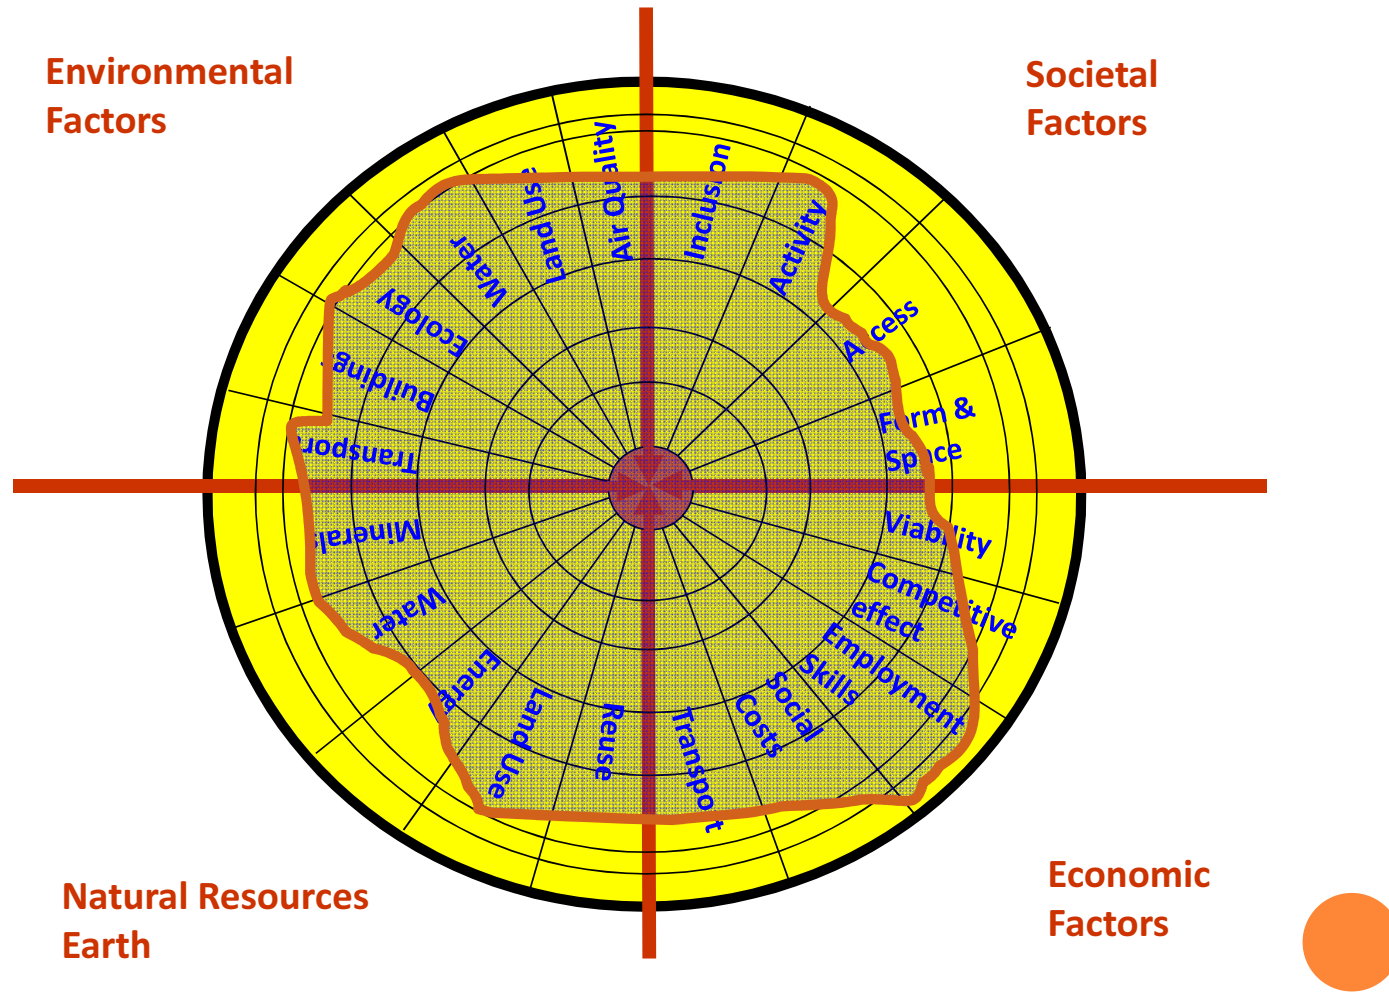

Transfer of knowledge to other projects

Filtration plant used 55% fly ash replacement
Invited talks, technical tours, case studies

Value by Design in Action

Sustainable Appraisal of a Project / Product

SPEAR Riches, 2003

HOW BIG IS YOUR FOOTPRINT?

Are you practicing Value by Design?

Why integrate the best of Value Engineering And Sustainability ideas?

- Value Engineering has saved the private industry and governmental agencies many \$Billions since its inception in 1947.
- The VE approach promotes the philosophy of ***“Do the Right Thing Right the First Time.”***
(DTRT RTFT)
- Sustainability Concepts look at the holistic development which can be ideally combined in the VE style work plan.
- A shift in paradigm is required to include Sustainability aspects in the study.
- VbD looks at Financial, Social and Environmental costs (*i.e., Three bottom lines*)
- ***Integrated – Strategic - decision making for final selection of proposals***
- ***Good synergy when used with Value Methodology***

WHAT IS VALUE?

$$\text{Value} = \frac{\text{Worth}}{\text{Cost}}$$

V.E. Objective is to make $\frac{W}{C} \sim =1.00$ or better

'Low cost' need not give you high value
Higher satisfaction at lower cost improves value

\$2500

Tata Nano

\$50000

Jaguar

←→
Value enhanced

Both have optimized value

Both owned by the same company- TATA Motors, India

Understanding the **Customer**
 True usage of **Target Costing** (~\$2000)
No Gold plating or Strip Down
 True **Function-based** product design
Operating cost (21 km/Ltr.)
 Open Innovation in Design

WHAT MAKES THE TATA NANO SO CHEAP?

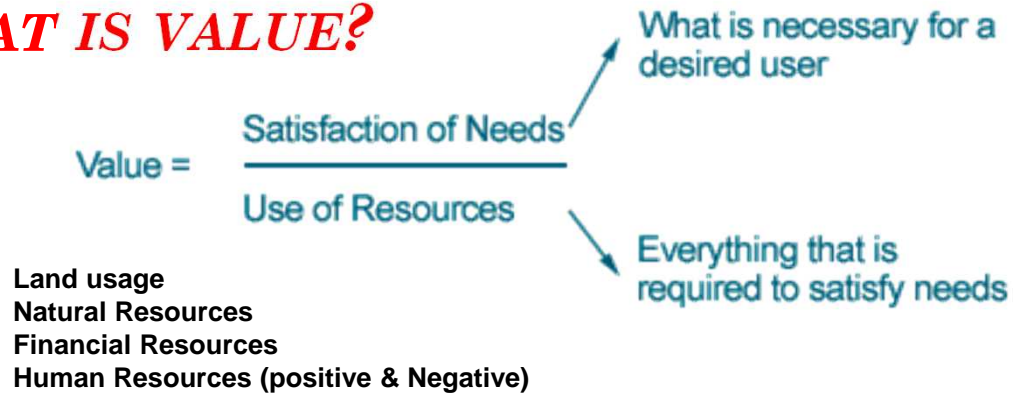

TATA NANO
 Jaguar & Land Rover (\$50,000)
 - also owned by TATA

Tata Airpod
Single seat . Compressed air fuel
Innovation, sustainabaility

WHAT IS VALUE?

VbD Optimization aims at maximizing the Integrated Value

Best Value is about improving the understanding of the business/project needs and delivering on it in a responsible manner.

Invention by
Mohammed Saidullah

**The Amphibious Bicycle – Innovation from India
Ideal for flood prone areas! (Discovery & BBC reports)**

Creativity and Innovation requires an open mind!

Value by Design Objective:

Utilize a systematic approach, to identify the required functions and deliver the project at the lowest possible cost, keeping the design intent unchanged.

Expectations:

- 1. Reduction on construction costs,**
- 2. Reduced use of Natural Resources**
- 3. Reduced use of Land**
- 4. Improved operational performance, Safety**
- 5. Reduced maintenance costs (loss time, shutdown, etc.)**
- 6. Identification of risks and mitigation strategies (Safety by design?)**
- 7. Lower life cycle costs (Financial, social & environmental)**
- 8. Integrated enhancement of Value (triple bottom line)**

How is 'Value by Design' done?

Value Methodology uses a combination of **creative** and **analytical** techniques to identify alternative ways to achieve objectives.

The use of **Function Analysis** differentiates Value Engineering from other problem solving approaches.

Function Analysis Systems Technique

F A S T

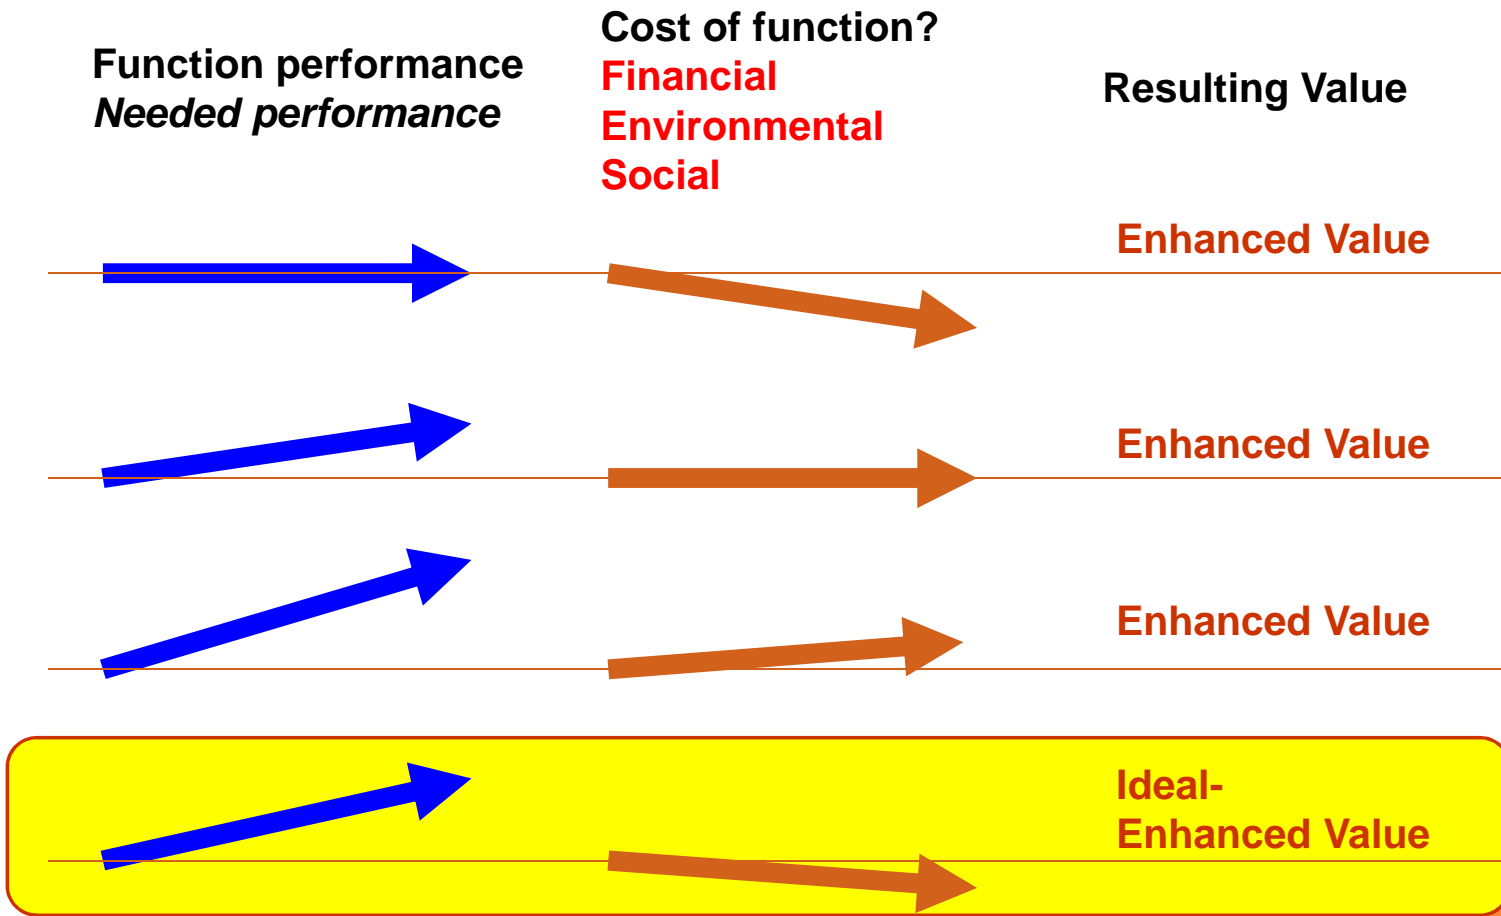

- **Charles Bytheway**

Father of 'FAST'

SAVE Conference, Detroit, 2009

How do we Improve Value of a function?

Value by Design is not

- **What a good Project Manager “does already”.**
- **A task that can be fully outsourced to a consultant**
- **An effort to trade off essential functions to cut costs.**
- **Merely a review to eliminate “Gold Plating”.**
- **A method for reducing costs through degrading performance and reliability.**
- **In any way intended as a reflection on the competence of the designer.**
- **An effort to cheapen the design.**
- **Only done at end of design or start of construction to return project to budget**
- **An effort to show off Environmental stewardship**
- **An effort to keep the paper work intact**

HOW IS VBD DIFFERENT FROM CONVENTIONAL METHODS?

Conventional Approach

Item oriented

Analytical, based on habits

Cost visibility by components
(material, labor etc.)

Individually oriented
(cost engineer
peer reviewer?)

Financial Cost
is the main (and only) concern

Value by Design Approach

Function oriented

Creative and Innovative
not based on habits

Cost visibility by function
(primary, secondary, etc.)

Team oriented
(brain storming/steering)

All 3 bottom lines are considered
Financial
Environmental
Social

Integrated Assessment model

IS THERE A GOOD TIME TO DO VBD?

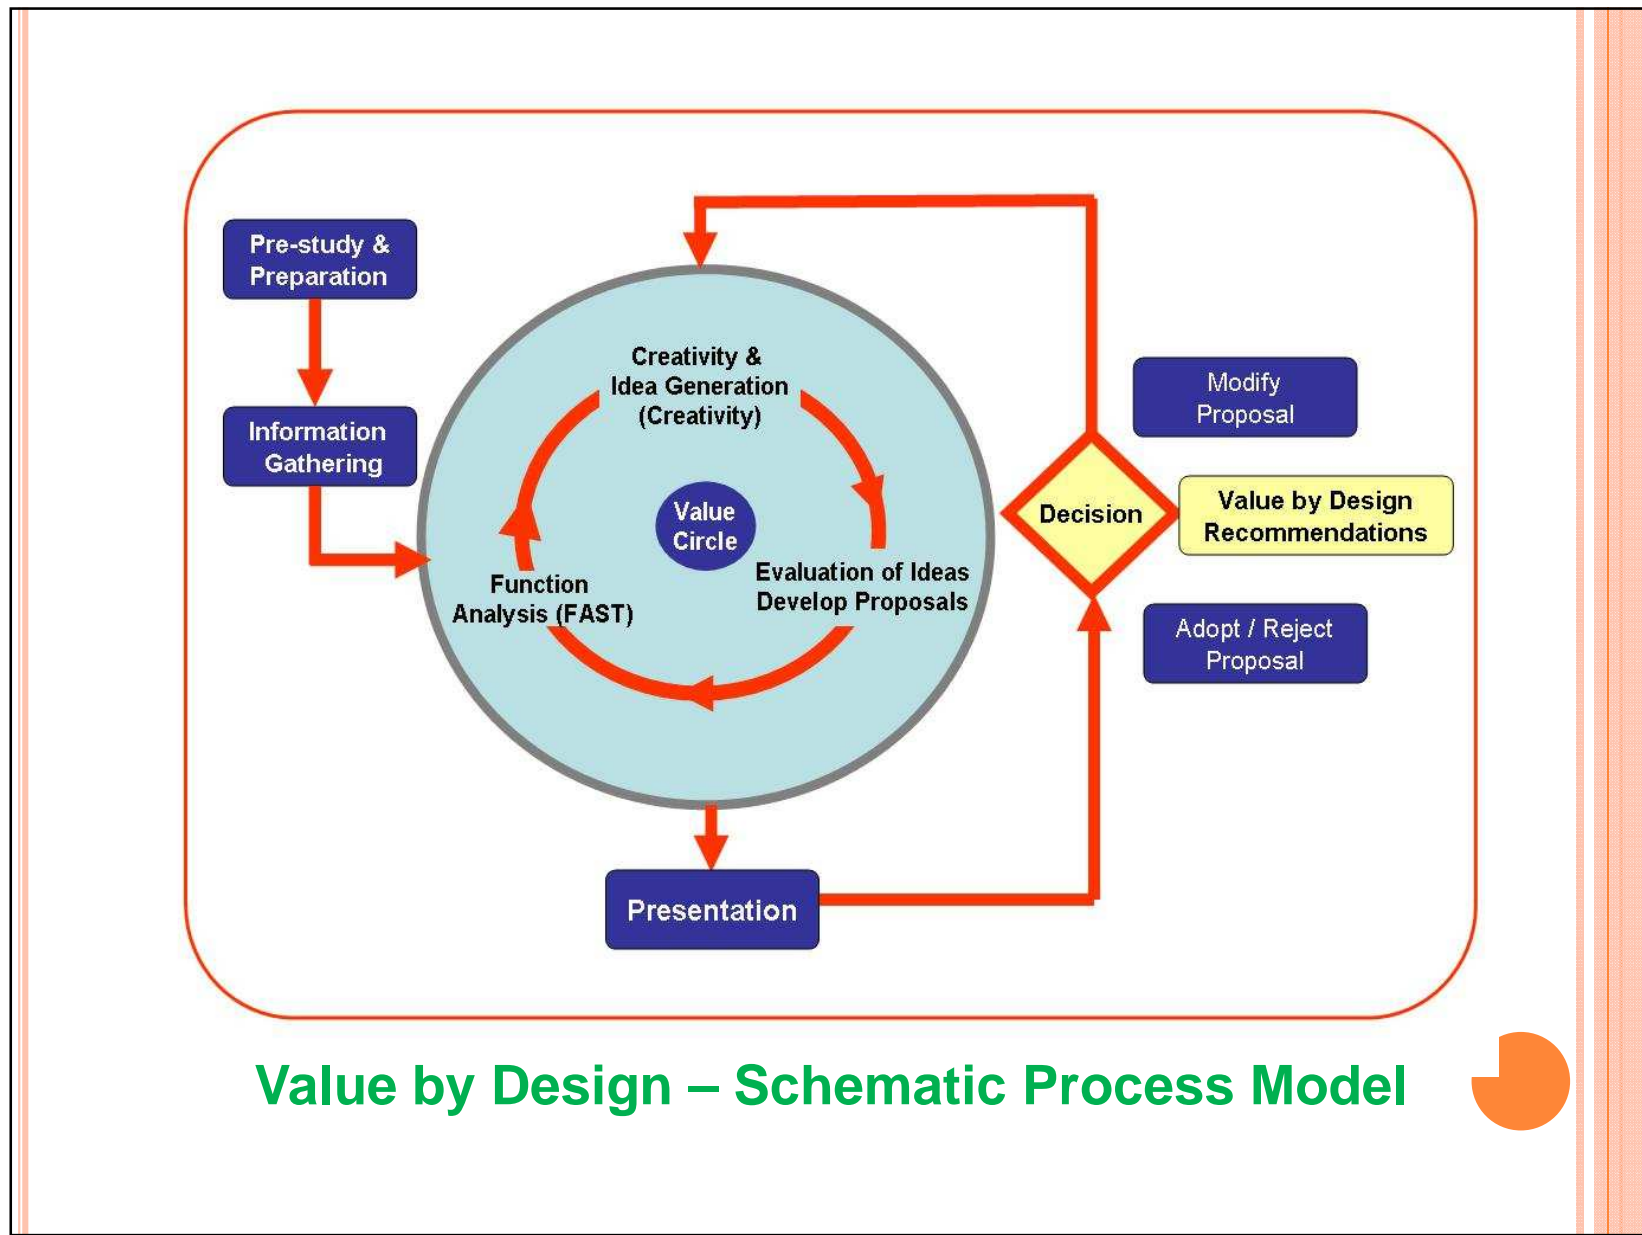

Time scale

'Value by Design' Study

Follow-up & Review

Timing for Value by Design Study in Project life cycle

Value by Design – Schematic Process Model

Value by Design - Responsibility Matrix.

	Task	Project sponsor	Project Manager	Project Engineer	Task Manger	Engineering Managers	Principal Engineer
1	Value by Design Study (Overall)	I	A	R	R	I	I
2	Sourcing a Certified Value Specialist		I	A	R		
3	Sourcing workshop participants		C	A	R	C	I
4	Ensuring participation of RESC	I	A	R	R		
5	Conducting Value Workshop	I	C	A	R	I	I
6	Value by Design Report	I	C	A	R	I	I
7	Presenting Recommendations	I	C	A	R	I	C
8	Review & Sign-off on Recommendations	I	A	R	R	R	R
9	Follow-up Review & Reporting for Gates 3 & 4	I	A	R	R	C	C
10	Summary & Lessons learned	I	C	A	R	I	I

A - Accountable; R- Responsible; C: Consulted; I: Informed

Value based Sustainable Design

Corporate Sustainability Priorities and Goals

1. **Specific priorities**, e.g. community development, climate change, water conservation, etc.
2. **Use of LEEDTM**, SPiRiT, WSS Protocol, CHPS, Built Green, or other evaluation approaches.
3. **Organization's sustainable design guidelines**, e.g. use of integrated design, LCA/LCC, others.

Decision / Selection Criteria

Establish the decision criteria to be considered in evaluating and selecting design solutions: e.g.,

1. Corporate values.
2. Design principles.
3. Financial parameters/pro forma.
4. Life cycle cost analysis.
5. Environmental life cycle analysis.
6. Social Commitments

(Steven Page- Olympic Associates)

Critical Success Factors for VbD

Methodology / Standard SAVE process; use a CVS

Value job plan must be followed systematically

Attitude of Participants

Right attitude, appropriate stakeholders, awareness of process

Project Charter - Partnering

Create a project charter to clearly show the 'vision' subject to Corporate policies

Executive support

VbD workshops, sponsorship, implementation of results

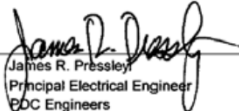

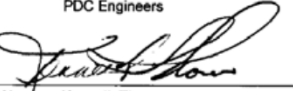

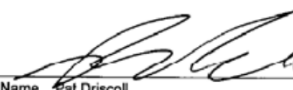

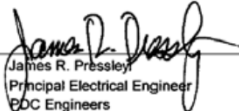

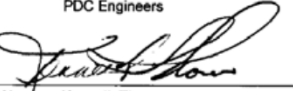

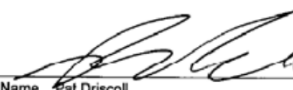

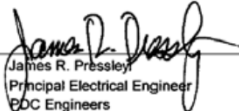

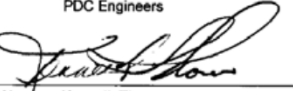

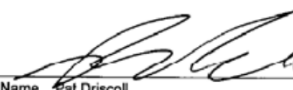

Management of Process

Clear objectives, timelines, review and feedback (who?, what?, when?)

Professional Workshop Facilitation

Probing with right questions, using appropriate tools, managing the process, maintaining momentum of team, etc. etc.

Project Charter/Partnering Agreement

(Steven Page- Olympic Associates)

VbD Workshops

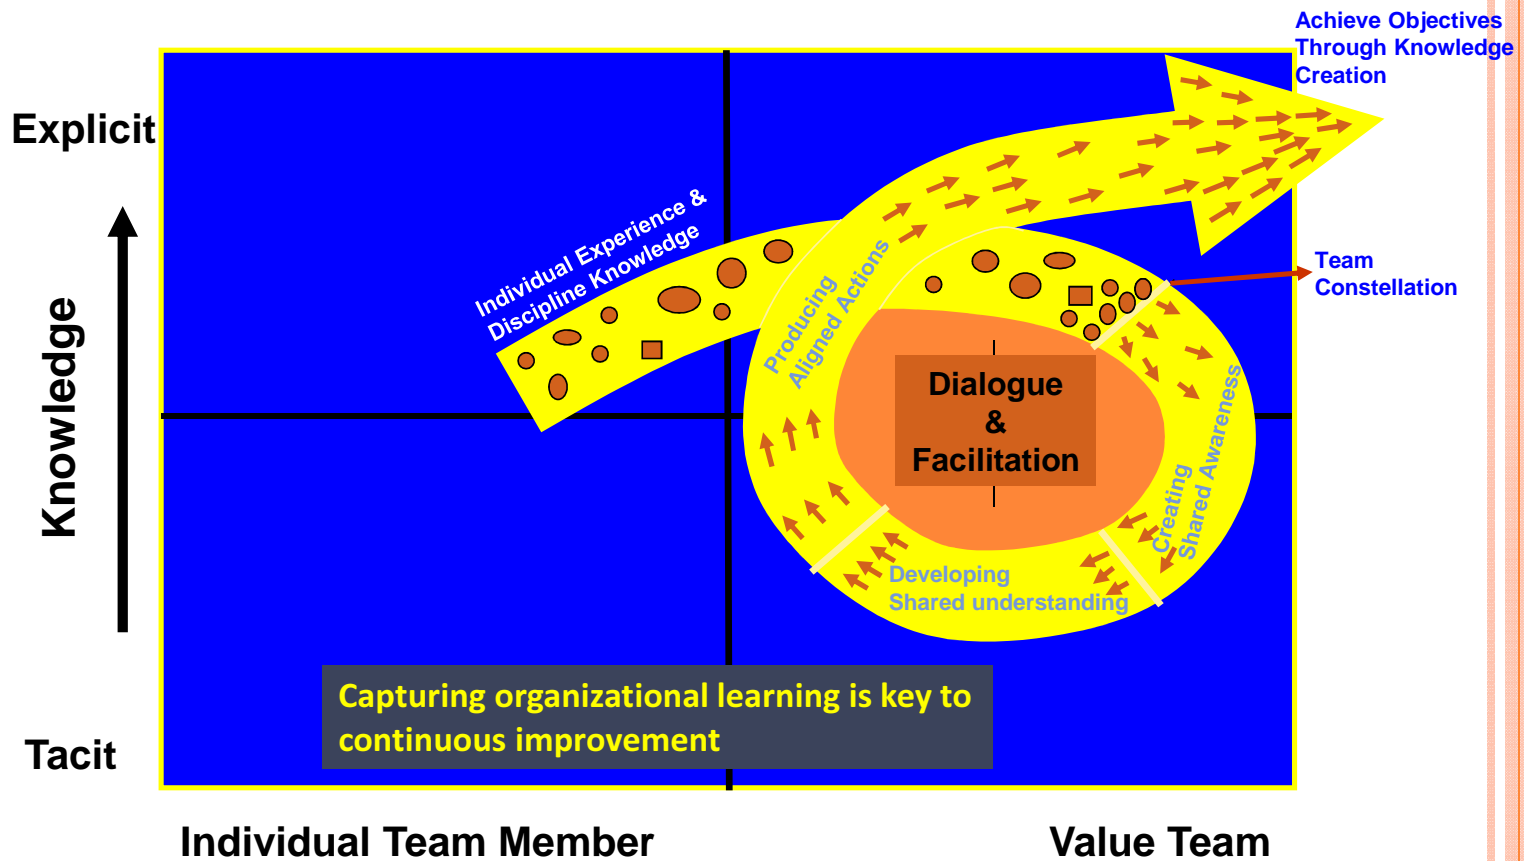

Multi-disciplined team approach

- Include all professionals
(arch., struct., civil, mech., envi., and elec., etc.)
- Involve the Owner, Consultants and Construction Manager.
- Involve major stake holders
- Create a project charter (partnering?)
- Sustainability strategy and business guideline
- Strategic decision making guidelines
- Internal champion is a must
- Must be coordinated by a trained facilitator, CVS

**Similar to VE Workshop,
but add specific Sustainability considerations/ resources**

Value by Design – Knowledge Creation

Knowledge Creation Process in Value Team

VbD Phase	Agenda

 - Detailed case study of the Dam
- **XXXXX PROJECT UPGRADING OF PENSTOCKS**
 - Project is under development – Detailed case study

VBD* STUDY

SUMMARY

- **Value Ideas:**
 - 176 'raw' Ideas Generated
 - 60 Ideas Shortlisted
 - 26 Ideas Developed in to VE Proposals

* Originally done as a VE Study

Summary of Proposals & Recommendations:

Rejected VE Proposals due to increased costs & not commensurate with benefits	2
VE Proposals considered for Design improvements (9 accepted)	12
Rejected VE Proposals after general considerations	7
Accepted VE Proposals for further consideration*	2
Accepted VE Proposals at the Preliminary Design*	3

Proposals with the highest impact

Design change Proposal adopted and are currently being constructed.
Install a plastic concrete cut off wall instead of jet grouting the right abutment slab

Financial

savings of \$ 8.00 million – adopted

Environmental benefits.

Less water pollution

Fish flow maintenance

Tree planting

Taking care of species – animals and plants

Social benefits –

First Nations sensitive areas avoided

Sensitive areas enhanced with consultations

Provided jobs to local native business owners

Reduced use of land

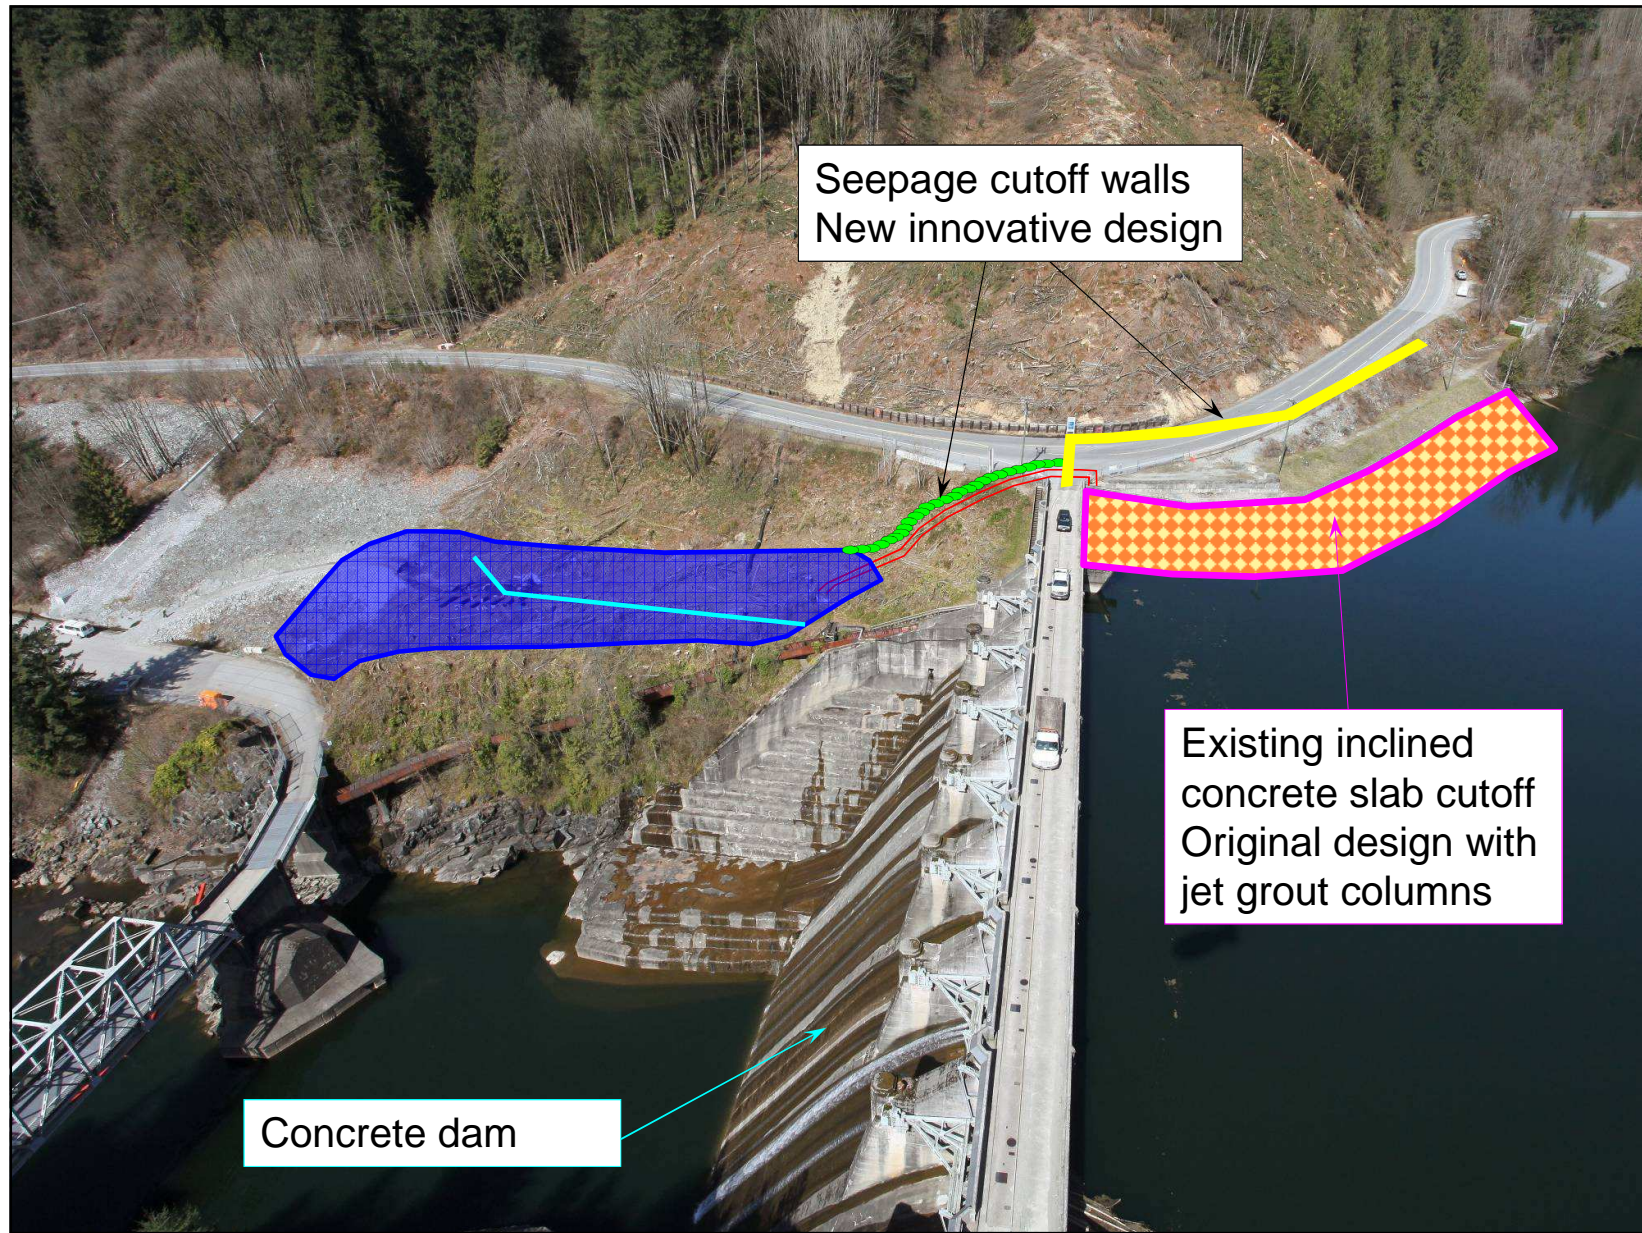

Project Site

Upstream

Seepage cutoff walls
New innovative design

Existing inclined
concrete slab cutoff
Original design with
jet grout columns

Concrete dam

CUTOFF WALL AND EXCAVATION

A plastic concrete cut off wall instead of jet grouting
VE Proposal savings of \$ 8.00 million – adopted
additional environmental benefits not quantified in \$\$.

Accomplishments - Ruskin Value Study.

1. VE proposals resulted in significant design decisions with impact on cost estimate. **Cost savings of a minimum of \$8 million achieved with a potential for additional savings.** \$150,000 was spent for the study.
2. Several VE proposals adopted in design with no significant impact on cost, but **improved the quality of design.**
3. VE study resulted in **confirming that most of the design decisions thus far have been appropriate and thereby validating them.**
4. Established the **VE study as a tool for the management to ascertain that almost all possible design options have been studied** before making major design decisions.
5. Created **enhanced trust and reliance on the classic VE study** which will potentially be applied to all major projects in BC Hydro. This will hopefully result in a shift in culture of project delivery within the organization.

Sustainable Appraisal of the Ruskin Proposal*

* For demonstration only

SPEAR Riches, 2003

Ruskin Dam VE Study

Winner of Outstanding Accomplishment

2009 SAVE Annual Conference – Detroit 29 June to 2 July 2009

BC Hydro
NCE- VE Consultants

RFP – Requirements of VbD Study

Review and evaluate the methods and approaches specified in the feasibility design documents developed to-date.

Study the effectiveness of the proposed design solutions, including scheduling and phasing

Develop and/or refine concepts or components to improve performance and/or reduce cost, while maintaining design standards and codes, safety and reliability.

Integrate ideas of Sustainability in the study

Social and environmental values to be considered along with life cycle financial impact

Integrate Safety by Design concepts in the study

Consider enhancement of Safety aspects for the project in the study

Case study-2. XXXXX PROJECT -

- **UPGRADING OF PENSTOCKS**
- **Project is under development –**

Value by Design

Strengths

- Optimization of Quality / Performance
- Overall Cost Optimization
- Appropriate, Sustainable Technology
- Sustainable (Reduce, Reuse and Recycle) Approach
- Enhanced Reliability & Safety
- Socially Responsible solutions
- Risk Mitigation (bad news upfront)

Limitations/Hurdles

- Value team should be involved right from the beginning
 - Company policy must be clear upfront
- Reliance on creativity and lateral thinking
 - Team work is a must
- Change in culture may be needed
 - Can result in many intangible changes
- Initial cost (time and effort) may be a deterrent
- Management may not see the importance

Value by Design & Sustainable development

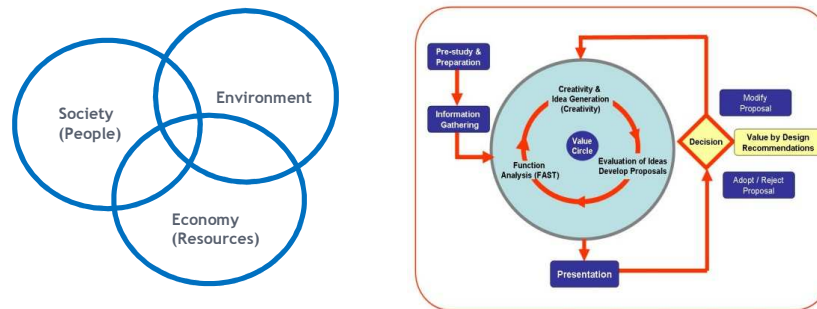

Potential Value Strategies include:

- **Partnership**
- **Partnering approach**
- **Input from public and stakeholders:**
- **Impact mitigation program for all affected parties**
- **Minimize public disruption**

- **Maximize Recycling**
- **Use of 'Green construction'**
- **Minimize green house gas emissions**
- **Environmental and noise monitoring during construction**
- **Tree protection and replanting /replacement program**

- **Optimized cost, minimize land use**
- **State of the art technology (long term planning)**
- **Integration of enhanced public safety, reliability**
- **The development to achieve triple bottom line balance .**

VALUE BY DESIGN !

- SYSTEMATIC APPROACH (VALUE METHODOLOGY)
- SUSTAINABILITY CONSIDERATIONS (NOT JUST \$\$)
- FULL USE OF CREATIVITY & TEAM WORK
- LIFE CYCLE - COST, MAINTENANCE, SUSTAINABILITY
 - Triple bottom line approach
- KNOWLEDGE TRANSFER AND ORGANIZATIONAL LEARNING
- GOOD SYNERGY WITH SAFETY BY DESIGN
